

1. The attached excel file has two worksheets – (1) Generation zones and (2) demand Zones.
2. Each worksheet has the following information (for each season and peak and other than peak conditions)
 - a. Name of the bus
 - b. State
 - c. Generation / Demand at that zone considered in the load flow
 - d. Usage Cost of the network by generation / demand at that node in (paise/hr) computed using the Marginal Participation Method
 - e. Paise / kW /hr at each node
3. Zones, as indicated in the worksheets have been considered using two criteria:
 - a. Access charge (paise/kW/hr) in a logical range
 - b. Geographic proximity / state political boundaries
