## Tata Power- Comments on Draft DSM Regulations 2024- PART A

| Sr<br>No. | Clause. No./Title                          | Original Provision as in Draft  | Revision Proposed   | Comments/Suggestions  |
|-----------|--|---|---|---|
| 1.        | 3 (1)<br>Definitions and<br>Interpretation | <ol> <li>Renewable Rich State' or<br/>'RE-rich State' means a<br/>State whose combined<br/>installed capacity of solar<br/>and wind generating<br/>stations under the control<br/>area of the State is 1000<br/>MW or more but less than<br/>5000 MW.</li> <li>'Renewable Super Rich<br/>State' or 'RE Super-rich<br/>State' means a State whose<br/>combined installed capacity<br/>of solar and wind generating<br/>stations under the control<br/>area of the State is 5000<br/>MW or more.</li> </ol> | <ul> <li>Following 2 categories to be included:</li> <li>3) <u>Renewable Most Rich State-1 or</u><br/><u>RE Most Rich State-1</u> means a<br/>State whose combined installed<br/>capacity of solar and wind<br/>generating stations under the<br/>control area of the State is more<br/>than 10000 MW but less than<br/>15000 MW.</li> <li>4) <u>Renewable Most Rich State-2 or</u><br/><u>RE Most Rich State-2</u> means a<br/>State whose combined installed<br/>capacity of solar and wind<br/>generating stations under the<br/>control area of the State is 15000<br/>MW or more.</li> </ul> | Since there are some states that<br>have significant installed solar+<br>wind capacity much higher than<br>10,000 MW viz. Gujarat (~24000<br>MW); Rajasthan (~26,000 MW);<br>Tamil Nadu (~ 18000 MW);<br>Karnataka (~14,000 MW);<br>Maharashtra (~12,000 MW).<br>Therefore, it makes sense to<br>differentiate in terms of volume<br>deviation limits in these high RE<br>states.<br>We thus, request to <b>include 2</b><br><b>more categories a provided.</b> |
| 2.        | 3 (1)<br>Definitions and<br>Interpretation | (X)<br><b>'Reference Charge Rate' or</b><br><b>'RR'</b> means (i) in respect of a<br>general seller whose tariff is<br>determined under Section 62 or   | The draft may be modified accordingly to incorporate the suggestions provided.  | In case of plants operating under<br>Section 11, the applicable tariff at<br>which energy is being supplied<br>by the generator is the  |

| Sr<br>No. | Clause. No./Title                                 | Original Provision as in Draft  | Revision Proposed  | Comments/Suggestions  |
|-----------|---|---|--|---|
|           |   | Section 63 of the Act, Rs/ kWh<br>energy charge<br>as<br>5)   |  | 'Benchmark Rate' determined by<br>the MoP Committee.<br>It is therefore requested that the<br>same may please be qualified<br>while defining the 'Reference<br>Charge Rate' or 'RR'.  |
| 3.        | 7.<br>Normal Rate of<br>Charges for<br>Deviations | <ul> <li>(1) The Normal Rate (NR) for a particular time block shall be equal to the sum of:</li> <li>(a) 1/3 [Weighted average ACP (in paise/kWh) of the Integrated-Day Ahead Market segments of all the Power Exchanges];</li> <li>(b) 1/3 [Weighted average ACP (in paise/kWh) of the Real-Time Market segments of all the Power Exchanges]; and</li> <li>(c) 1/3 [Ancillary Service Charge (in paise/kWh) computed based on the total quantum of Ancillary Services deployed and the net charges payable to the Ancillary Service Providers for all the Regions].</li> </ul> | The draft may be modified accordingly<br>to incorporate the suggestions provided | While the revised methodology<br>has rationalized the normal rate<br>of charges, it is suggested that<br>the cap of INR 12/kWh may still<br>be maintained. This is because<br>the cost of deployment of<br>ancillary services may increase<br>in some time blocks, increasing<br>the normal rate of charges to<br>abnormally high level.<br>The above was acknowledged<br>by the CERC in its order dated<br>26-12-2022.<br>It is therefore requested to<br>retain the INR 12/kWh capping. |

| Sr<br>No. | Clause. No./Title  | Original Provision as in Draft   | Revision Proposed  | Comments/Suggestions   |
|-----------|--|--|--|--|
| 4.        | 7.<br>Normal Rate of<br>Charges for<br>Deviations  | (c) 1/3 [Ancillary Service<br>Charge (in paise/kWh)<br>computed based on the total<br>quantum of Ancillary Services<br>deployed and the net charges<br>payable to the Ancillary Service<br>Providers for all the Regions]. |  | Ancillary Services Charge will<br>have a direct impact on revenue of<br>the generators. Hence, a detailed<br>procedure needs to be specified<br>for calculation of Weighted<br>Average Ancillary Service<br>Charge (in INR/ kWh) for each<br>time block and such calculation of<br>Ancillary Services Charge should<br>be transparent and be made<br>readily available on the related<br>websites.                       |
| 5.        | 8 (1)<br>Charges for<br>Deviation, in respect<br>of a general seller<br>Deviation by way of<br>over injection<br>(Receivable by the<br>Seller) | (ii) When [50.00 Hz < $f \le 50.05$ Hz], for every increase in $f$ by 0.01 Hz, charges for deviation for such seller shall be reduced by 10% of RR_so that charges for deviation become 50% of RR when $f = 50.05$ Hz      | <ul> <li>(i) When [50.00 Hz &lt; f ≤50.03 Hz], charges for deviation for such seller shall be equal to RR.</li> <li>(ii) When [50.03 Hz &lt; f ≤50.05 Hz], , charges for deviation for such seller shall be 50% of RR</li> </ul> | During over injection scenario, in case of marginal increase in frequency (0.01 Hz above 50 Hz), the receivable to seller decreases by 10% and subsequently by 20% and 30% till 50.03 Hz. Such steep reductions in receivables for marginal variation in frequency are onerous to the seller. Infact, the existing regulations ( <i>CERC interim measures dated 6th Feb'23</i> ) provides 100% receivable till 50.03 Hz. |

| Sr<br>No. | Clause. No./Title | Original Provision as in Draft | Revision Proposed | Comments/Suggestions   |
|-----------|-------------------|--------------------------------|-------------------|--|
|           |                   |                                |                   | <ul> <li>Generators which are already<br/>operating under ancillary<br/>services and AGC, managing<br/>0.01 Hz frequency gap would<br/>be practically impossible. A<br/>band of at least 0.03 Hz<br/>frequency gap from 50 Hz, will<br/>be appropriate so that the<br/>generator is not unduly<br/>penalized.</li> </ul> |
|           |                   |                                |                   | <ul> <li>Generating stations have<br/>ramping limitations. Instant<br/>response to sudden<br/>frequency changes of such<br/>minor step (0.01 Hz) is<br/>technically impossible. Any<br/>delay will subject the seller to<br/>loss of RR by a proportion of<br/>10%.</li> </ul>   |
|           |                   |                                |                   | • Further, often there is lag in getting information about system frequency changes, which will put the seller at risk of losing a significant amount of revenue.  |

| Sr<br>No. | Clause. No./Title  | Original Provision as in Draft   | Revision Proposed   | Comments/Suggestions  |
|-----------|--|--|---|---|
|           |  |  |   | <ul> <li>In view of the above, the following is suggested:</li> <li>○ We suggest a band of at least 0.03 Hz frequency gap from 50 Hz so that the generator is not unduly penalized.</li> <li>○ Existing regulations of 100% RR receivable to seller for 50.0 <f≤ 50.03="" be="" li="" may="" retained.<=""> </f≤></li></ul> |
| 6.        | 8 (1)<br>Charges for<br>Deviation, in respect<br>of a general seller<br>Deviation by way of<br>over injection<br>(Receivable by the<br>Seller) | (iii) When [49.90 $\leq$ f < 50.00 Hz],<br>for every decrease in <i>f</i> by<br>0.01 Hz, charges for<br>deviation for such seller<br>shall be increased by 1.5%<br>of RR so that charges for<br>deviation become 115% of<br>RR when <i>f</i> = 49.90Hz | When [49.90 $\leq$ f < 50.00 Hz], for every<br>decrease in <i>f</i> by 0.01 Hz, charges for<br>deviation for such seller shall be<br>increased by <del>1.5%</del> <del>3%</del> <del>3%</del> <del>3%</del> <del>500 ft so that<br/>charges for deviation become <del>115%</del> <del>130%</del> <del>500 ft so that</del> <del>500 ft so that so</del></del> | The 1.5% receivable percentage<br>is not comparable with the<br>payable percentages (3% and<br>5%) during under injection<br>scenario, hence should be<br>increased to atleast 3%.  |
| 7.        | 8 (4)  |  |   | The depooling of deviation charges should not be left to the individual sellers and the QCA, as   |

| Sr<br>No. | Clause. No./Title   | Original Provision as in Draft   | Revision Proposed   | Comments/Suggestions  |
|-----------|---|--|---|---|
|           | Charges for<br>Deviation, in<br>respect of a WS<br>Seller | (c) depooling of deviation charges<br>for WS seller(s) connected to the<br>pooling station shall be as per the<br>methodology mutually agreed<br>upon between the QCA and<br>such individual WS seller(s). | (c) depooling of deviation charges for WS<br>seller(s) connected to the pooling station<br>shall be as per the methodology <del>mutually</del><br>agreed upon between the QCA and such<br>individual WS seller(s). to be prepared by<br>Grid-India and approved by CERC, and<br>the basis of such methodology would be<br>the contribution to Deviation by each<br>individual WS Seller connected to said<br>pooling station. | this would be susceptible to<br>frequent disputes and delayed<br>DSM payment to pool. An<br>aggregated DSM charge at the<br>pooling station would have to be<br>depooled in such a manner that a<br>WS Seller over injecting is paid<br>from deviation pool and one under<br>injecting pays back at the price<br>mentioned in its agreement/ PPA.<br>Leaving this to discretion of QCA<br>and seller's bilateral arrangements<br>opens up a pandora's box of<br>potential litigations/ disputes,<br>thereby derailing the concept of<br>aggregation itself.<br>Accordingly, it is requested that<br>the methodology for depooling<br>be pre-defined basis<br>contribution to deviation by<br>each WS Seller connected to<br>pooling station, rather than<br>relying on mutual agreement<br>between WS Seller and QCA. |

| Sr<br>No. | Clause. No./Title   | Original Provision as in Draft   | Revision Proposed  | Comments/Suggestions   |
|-----------|---|--|--|--|
| 8.        | 8 (4)<br>Charges for<br>Deviation, in<br>respect of a WS<br>Seller. | a) the contract rate for the purpose<br>of deviation shall be equal to the<br>weighted average of the contract<br>rates of all individual WS seller(s)<br>opting for aggregation at the<br>pooling station | a) the contract rate for the purpose of<br>deviation shall be equal to the weighted<br>average of the contract rates of all<br>individual WS seller(s) opting for<br>aggregation at the pooling station. For<br>WS sellers which are captive generators<br>the transfer price for supplying captive<br>energy to captive user shall be<br>considered for the purpose of deviation; | More than 30 GW of ISTS<br>connected captive generators are<br>coming up across the country to<br>supply power to captive users<br>seeking to go green. This market<br>is slated to further grow as export-<br>oriented industries face carbon<br>taxes like Carbon Border<br>Adjustment Mechanism in Europe.<br>Hence, huge investment in going<br>green is happening in the country<br>with end users paying for setting<br>up renewable projects. As a<br>captive project has no tariff (sale<br>of energy not involved), the<br>reasonable cost of transferring<br>energy to captive user is<br>recovered by captive generator<br>under captive energy delivery<br>agreement.<br>Such cost of transferring energy or<br>transfer price is captured in<br>captive energy delivery agreement<br>and should be considered for<br>calculating deviation charges. |

| Sr<br>No. | Clause. No./Title  | Original Provision as in Draft   | Revision Proposed                       | Comments/Suggestions   |
|-----------|--|--|---|--|
| 9.        | 8 (4)<br>Charges for<br>Deviation, in<br>respect of a WS<br>Seller | <ul> <li><u>Category of WS and their</u><br/><u>Volume deviation limits</u></li> <li>A generating station based on<br/>solar or a hybrid of wind –<br/>solar resources or<br/>aggregation at a pooling<br/>station</li> <li>A generating station based on<br/>wind resource</li> </ul> |   | In the draft regulations, the<br>hybrid of wind and solar has<br>been tagged with plain vanilla<br>solar and hence is subject to the<br>same deviation charges as<br>applicable to plain vanilla solar.<br>However, for hybrid cases,<br>where the proportion of wind<br>component is higher than solar<br>component, subjecting it to the<br>charges applicable to solar<br>(which has a narrower deviation<br>band than that of plain vanilla<br>wind) would not be appropriate.<br>Therefore, it is <b>requested that</b> ,<br><b>for hybrid cases</b> , <b>the<br/>applicable charges should be<br/>based on the technology<br/>which is in higher proportion.</b><br>If wind is dominating, charges of<br>wind should be applicable, and if<br>solar is dominating, charges of<br>solar to be applicable. |
| 10.       | 8 (5)<br>Charges for<br>Deviation, in respect                      | Charges for Deviation, in respect<br>of a Standalone Energy Storage<br>System (ESS), shall be at par<br>with the charges for Deviation for   | Clarity may be provided as per comment. | The ESS shall be scheduling/drawing power from the grid to charge itself. How will   |

| Sr<br>No. | Clause. No./Title   | Original Provision as in Draft   | Revision Proposed  | Comments/Suggestions  |
|-----------|---|--|--|---|
|           | of a Standalone<br>Energy Storage<br>System (ESS)   | a general seller other than an<br>RoR generating station or a<br>generating station based on<br>municipal solid waste or WS<br>seller as specified in Clause (1)<br>of this Regulation   |  | be the treatment for deviation in<br>such case<br>Please note, as per the Sharing<br>Regulations, an ESS cannot be a<br>Drawee DIC.<br><b>Clarity may be provided</b> . |
| 11.       | 8 (5)<br>Charges for<br>Deviation, in respect<br>of a <b>Standalone</b><br><b>Energy Storage</b><br><b>System (ESS)</b> | Charges for Deviation, in respect<br>of a Standalone Energy Storage<br>System (ESS), shall be at par<br>with the charges for Deviation for<br>a general seller other than an<br>RoR generating station or a<br>generating station based on<br>municipal solid waste or WS<br>seller as specified in Clause (1)<br>of this Regulation | -  | The regulation is silent on<br>behind-the- meter storage<br>technology.<br>Please clarify, how the same<br>shall be dealt with?   |
| 12.       | 8 (6)<br>Charges for<br>Deviation, in respect<br>of an ESS co-<br>located with WS<br>Seller(s)                          | Charges for Deviation, in respect<br>of an ESS co-located with WS<br>Seller(s) connected at the same<br>interconnection point, shall be as<br>follows: i) Such seller shall<br>provide a separate schedule for<br>WS and ESS components<br>through the Lead generator or<br>QCA at the interconnection<br>point;                     | <ul> <li>(I) Any over injection up to minimum of 5% of DGS or 50 MW shall be receivable as per RR and for under generation shall be payable zero up to minimum of 5% of DGS or 50MW.</li> <li>(II)For Deviation between [5% of DGS or 50 MW whichever is less] and [10% of DGS or 100 MW, whichever is less] and f within f band.</li> </ul> | In the table, there seems to be<br>typographical error in points (I)<br>and (II).<br>Same may be corrected as<br>suggested.   |

| Sr<br>No. | Clause. No./Title  | Original Provision as in Draft  | Revision Proposed  | Comments/Suggestions   |
|-----------|--|---|--|--|
|           |  | New Categories to be added.   | Buyer (being Super RE Most Rich<br>State-1)<br>-VLB (1) = Deviation up to 300 MW     | As mentioned in comments no. 2<br>above, 2 new categories under<br>'Buyer' need to be included in the<br>regulations.  |
|           |  |   | - VLB (2) = Deviation beyond 300 MW<br>& up to 400 MW                                | Hence, volume limits for the categories to be incorporated as  |
| 13.       | 8 (7)<br>Charges for<br>Deviation, in respect  |   | -VLB (3) = Deviation beyond 400 MW   | suggested.   |
|           | of a <b>Buyer</b>  |   | Buyer (being Super RE Most Rich<br>State-2)  |  |
|           |  |   | - VLB (1) = Deviation up to 350 MW   |  |
|           |  |   | - VLB (2) = Deviation beyond 350 MW & up to 450 MW                                   |  |
|           |  |   | -VLB (3) = Deviation beyond 450 MW   |  |
| 14.       | 9. Accounting of<br>Charges for<br>Deviation and<br>Ancillary Service<br>Pool Account10. Schedule of<br>Payment of | After receiving the data for deviation from the Regional Load Despatch Centre, the Secretariat of the Regional Power Committee shall prepare and issue the statement of charges for deviation | The draft may be modified accordingly<br>to incorporate the suggestions<br>provided. | It has been found that on few<br>occasions, the <b>statements</b><br><b>issued by RPC are erroneous</b> .<br>In such cases, RPCs have to be<br>intimated to correct and verify the<br>same.<br>• It is requested that such |
|           | charges for deviation  | prepared for the previous   |  | instances may be taken into  |

| Sr<br>No. | Clause. No./Title  | Original Provision as in Draft   | Revision Proposed  | Comments/Suggestions  |
|-----------|--|--|--|---|
|           |  | week to all regional entities by<br>ensuing Tuesday<br>10 (1)<br>The payment of charges for<br>deviation shall have a high<br>priority, and the concerned<br>regional entity shall pay the<br>due amounts within 7 (seven)<br>days of the issue of the<br>statement of charges for<br>deviation by the Regional<br>Power Committee, failing<br>which late payment surcharge<br>@ 0.04% shall be payable for<br>each day of delay |  | <ul> <li>consideration and delay due to the above <u>should not be</u> <u>subject to any consequences</u> <u>like LPS as per 10 (1).</u></li> <li>It is suggested that the concerned regional entity should respond to RPC for any discrepancy <u>within 2 days</u> of receipt of the statement. Further, the RPC to send back the corrected statement <u>within 2 days from the intimation</u> of discrepancy by the regional entity.</li> </ul> |
| 15.       | 10.Schedule of<br>Payment of<br>charges for<br>deviation | <ul> <li>(1) The payment of charges for deviation shall</li></ul>  | The draft may be modified accordingly<br>to incorporate the suggestions provided | QCA is coordinating agency only<br>which has limited financial<br>capacity in terms of revenue<br>received from its services. Since<br>QCA has to coordinate with<br>respective RE Generators for<br>recovering the payment of<br>Deviation Charges from<br>generators for onward<br>submission to RLDC, the same is<br>subject to delays, as the activity  |

| Sr<br>No. | Clause. No./Title | Original Provision as in Draft                               | Revision Proposed | Comments/Suggestions  |
|-----------|-------------------|--|-------------------|---|
|           |                   | (3) In case of failure to pay into                           |                   | is dependent on how timely the  |
|           |                   | the Deviation and Ancillary<br>Service Pool Account within 7 |                   | RE generators pay to the QCA.   |
|           |                   | (seven) days entitled to encash the LC of the                |                   | In various state regulations, the   |
|           |                   |  |                   | timeline is relatively lenient. For   |
|           |                   |  |                   | e.g. as per ' <u>the Forecasting,</u>   |
|           |                   |  |                   | Scheduling, Deviation   |
|           |                   |  |                   | Settlement and Related Matters  |
|           |                   |  |                   | of Solar and Wind Generation  |
|           |                   |  |                   | Sources) Regulations, 2019' of  |
|           |                   |  |                   | <u>GERC</u> , it is as below:   |
|           |                   |  |                   | Clause 13.4- "Payment of all<br>charges on account of deviations<br>beyond the permissible limit at a<br>Pooling Station by Wind and<br>Solar generators shall have<br>priority over other payments and<br>shall be paid within 10 (ten) days<br>from the issuance of the account.<br>In case of default in payment<br>exceeding more than 2 days,<br>interest of 0.04% per day for<br>each day of delay shall be<br>levied." |

| Sr<br>No. | Clause. No./Title  | Original Provision as in Draft  | Revision Proposed  | Comments/Suggestions  |
|-----------|--|---|--|---|
|           |  |   |  | Therefore, we request the delay<br>by RE generators may please<br>factored, and we propose to<br>keep payment due date as 10<br>(ten) days from the issue of the<br>statement of charges and LPS<br>applicability beyond 12 days.<br>This is in line with GERC<br>regulation.   |
| 16.       | 10.Schedule of<br>Payment of<br>charges for<br>deviation | <ul> <li>(1) The payment of</li> <li>(2) Any regional entity</li> <li>(3) In case of failure to pay into the Deviation and Ancillary Service Pool Account within 7 (seven) days entitled to encash the LC of the concerned regional entity to the extent of the default and the concerned regional entity shall recoup the LC amount within 3 days</li> </ul> | The draft may be modified accordingly<br>to incorporate the suggestions provided | As mentioned in the previous<br>comment, in a QCA framework,<br>delay in payment by RE<br>generators is a common<br>occurrence. At the state level, in<br>case of delay in payment,<br>delayed payment charges are<br>imposed accordingly. However,<br>unlike the proposed regulation<br>10 (3), the encashment of LC at<br>the state level does not trigger<br>immediately after the due date<br>and considerable time is given<br>before LC encashment is<br>allowed. |

| Sr<br>No. | Clause. No./Title | Original Provision as in Draft | Revision Proposed | Comments/Suggestions   |
|-----------|-------------------|--------------------------------|-------------------|--|
|           |                   |                                |                   | For example, as per the<br><u>Procedure for Forecasting,</u><br><u>Scheduling, Deviation</u><br><u>Settlement and Related Matters</u><br><u>of Solar and Wind Generation</u><br><u>Sources) Regulations, 2015'</u> of<br>KERC, the following exist.                    |
|           |                   |                                |                   | Clause 10.1 (b)- " <i>if the</i> QCA fails<br>to pay deviation charges even<br>after a lapse of 60 days from the<br>date of issue of RE DSM bill,<br>process to encash the BG/LC<br>amount shall be initiated beside<br>any other action as permissible<br>under law " |
|           |                   |                                |                   | It is to be noted that encashment<br>of LC has serious implications for<br>the QCA, as it leads to<br>downgrading of credit rating, for<br>delay not directly attributable to<br>them.   |
|           |                   |                                |                   | Therefore, we request, that <b>atleast 15 working days</b> should be given from the date of issue of   |

|           | General Comment   |   |                   |                      |  |  |
| 1.        | No DSM penalty<br>shall be applicable<br>on generators while<br>they are Ramping<br>Up or Ramping<br>Down | As per current Tariff Regulations, thermal generators should have a minimum ramp rate of 1%. Based on this ramp rate schedules of generators are revised. For example, consider a 1000 MW generator having a ramp rate of 1%. The schedule in Time Block-1 (T-1) is 700 MW. Based on Ramp Rate of 1%, the schedule is revised to 850 MW in T-2. Technically it is not possible to ramp up the generation from 700 MW in T-1 to 850 MW in T-2 in a linear way – this will vary depending on the load, the make and the system configuration. The most a generator can do is that by the end of T-2, it achieves the schedule of 850 MW. This would apply to all time blocks when ramping up/ down is taking place. This constraint in Ramp operations has been recognized n the Ramp Up/Ramp Down Operating Procedure published by POSOCO. |                   |                      |  |  |

|           | Differential              | Deviation charges have been specified based on the volume deviation thresholds. For instances, for deviation volume upto 100 MW, applicable charges are there (say X). Similarly, for deviation beyond 100 MW, a differe set of deviation charges have been given. |  |                      |  |  |  |  |
| 3.        | application of<br>charges | charges applicable for <100 MW of  | n the above scenario, if the deviation volume is say 120 MW, will the 100 MW volume be subject to deviation charges applicable for <100 MW deviation and 20 MW volume be subject to deviation charges applicable for <100 MW deviation? Or the entire 120 MW be subject to deviation charges applicable for <100 MW deviation? |                      |  |  |  |  |

### Tata Power- Comments on Draft DSM Regulations 2024- PART B (Detailed

#### comments on WS Category)

<u>Clause 8.4 (Charges for Deviation, in respect of a WS Seller being a generating station</u> <u>based on wind or solar or hybrid of wind – solar resources, including the generating</u> <u>stations aggregated at a pooling station through QCA shall be without any linkage to Grid</u> <u>frequency, as under:</u>

Proposed Amendment:

#### Solar/hybrid (Wind-solar)/aggregation at a Pooling station

|        | Deviation by the way of over injection | Deviation by the way of Under injection |
|--------|--|---|
| Band   | (Receivable by the seller)             | (Payable by the Seller)                 |
| 0- 5%  | Contract Rate                          | Contract Rate                           |
| 5-10%  | 90% of the Contract Rate               | 110% of the Contract Rate               |
| 10-20% | 50% of the Contract Rate               | 150% of the Contract Rate               |
| Above  |  |   |
| 20%    | Zero                                   | 200% of the Contract Rate               |

# **Suggestion:** We suggest that Solar/Hybrid and QCA aggregation at the pooling station shall have separate bands as proposed –

Solar/hybrid:

| Band      | Deviation by the way of over injection (Receivable by the seller) | Deviation by the way of Under injection<br>(Payable by the Seller) |
|-----------|---|--|
| 0- 10%    | Contract Rate   | Contract Rate  |
| 10-15%    | 90% of the Contract Rate  | 110% of the Contract Rate  |
| 15-20%    | 70% of the Contract Rate  | 130% of the Contract Rate  |
| Above 20% | 50% of the Contract Rate  | 150% of the Contract Rate  |

#### In case of QCA Aggregation at Pooling station:

|           | Deviation by the way of over         | Deviation by the way of Under injection |
|-----------|--------------------------------------|---|
| Band      | injection (Receivable by the seller) | (Payable by the Seller)                 |
| 0- 8%     | Contract Rate                        | Contract Rate                           |
| 8-15%     | 90% of the Contract Rate             | 110% of the Contract Rate               |
| 15-20%    | 60% of the Contract Rate             | 140% of the Contract Rate               |
| Above 20% | 30% of the Contract Rate             | 170% of the Contract Rate               |

Analysis for the above recommendation are as follows:

#### I. Solar/Hybrid Generating station -

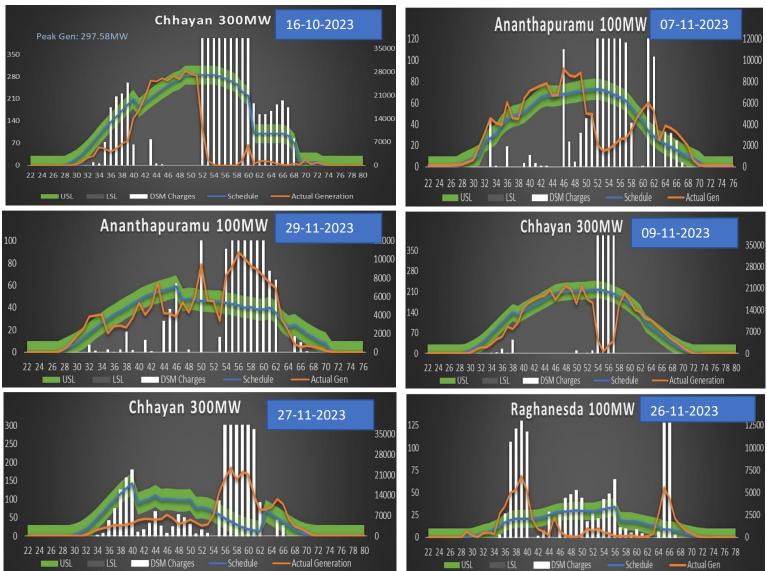

- The permissible band proposed for General seller is 10%, Run of River Hydro projects is 10%, MSW project is 20%, Wind projects is 10%. Therefore, for maintaining uniformity among all the sources we request a permissible band of 10% for Solar and Hybrid generating stations also.
- Solar projects are exposed to weather risks such as intermittent clouds, Rain, Fog, Dust Storms, Wind Speed etc., making the prediction to 5% band for all the time blocks through out the year is almost impossible. A brief analysis on the accuracies across the regions is shown below:

| Bifurcation of Time blocks in the respective bands |        |         |          |         |        |         |         |         |  |

#### a) Some of the Situations where the deviations have gone beyond 20% band –

- On analysis it was found that 50% to 60% of the time blocks are within the band of 5% and 78% to 85% of the blocks are within 10%. Hence, the proposed 5% band will risk 40% to 50% of the time blocks on an annual basis for payment of DSM charges. Therefore, we request to provide 10% band for Solar.
- Although 5% to 7% of the time blocks goes beyond 20% band, the charges accountable for these blocks are in the range of 60% to 80% of the total DSM charges. Most of the cases are un -avoidable & not in the control of the generators due to weather uncertainties. Some of the typical cases are shown above. Hence, providing zero beyond 20% band in either case (under injection & over injection) is not advisable, therefore we request to provide 50% of the revenue for the cases beyond 20% band.
- The proposed middle band of 10% to 20% for 50% penalty is large and most of the deviation occurs in this band across the regions, hence we request to kindly break this band into 2 as 10% to 15% and 15% to 20% with the penal charges of 10% and 30%.

• Comparison of DSM charges accountable to the generators for FY24 across the regions under different regimes are shown below –

|                | DSM Charges (% of revenue) |          |                                     |                         |                       |                     |  |  |  |  |

| NR             | Bhadla                     | 300      | 0.32%                               | 1.25%                   | 2.37%                 | 0.96%               |  |  |  |  |

• From above analysis, the generator shall have to contribute approx 0.8 to 1.1% of the generated revenue as per the suggested mechanism.

#### II. Aggregation at the Pooling Substation by QCAs -

- For analysis purpose, we have considered 4 Solar Parks namely 1400 MW Ananthapuramu Solar Park in SR, 2050 MW Pavagada Solar Park in SR, 600 MW Raghanesda Solar Park in WR and 3130 MW Bhadla -1 Solar Park in NR
- a) % of the timeslots aggregated at park level in the respective band across the regions for FY24

| Bifurcation of time blocks in respective bands |                                   |         |                              |         |                               |         |                               |         |  |
|--|-----------------------------------|---------|------------------------------|---------|-------------------------------|---------|-------------------------------|---------|--|
| Deviation Band                                 | Ananthapuramu<br>(SR-AP, 1400 MW) |         | Pavagada<br>(SR-KA, 2050 MW) |         | Raghanesda<br>(WR-GJ, 600 MW) |         | Bhadla -I<br>(NR-RJ, 3130 MW) |         |  |

| Bifurcation of time blocks in respective bands |                          |         |                     |         |                       |         |                   |         |  |
|--|--------------------------|---------|---------------------|---------|-----------------------|---------|-------------------|---------|--|
| Deviation<br>Band                              | Ananthapuramu<br>(SR-AP) |         | Pavagada<br>(SR-KA) |         | Raghanesda<br>(WR-GJ) |         | Bhadla<br>(NR-RJ) |         |  |
|  | %                        | Cum (%) | %                   | Cum (%) | %                     | Cum (%) | %                 | Cum (%) |  |
| 5%   | 0.00%                    | 0.00%   | 0.00%               | 0.00%   | 0.00%                 | 0.00%   | 0.00%             | 0.00%   |  |
| 8%   | 0.03%                    | 1.88%   | 0.06%               | 3.53%   | 0.04%                 | 2.19%   | 0.03%             | 3.05%   |  |
| 10%  | 0.03%                    | 1.99%   | 0.05%               | 3.39%   | 0.03%                 | 1.96%   | 0.03%             | 2.53%   |  |
| 12%  | 0.04%                    | 2.64%   | 0.09%               | 5.50%   | 0.06%                 | 3.93%   | 0.05%             | 4.11%   |  |
| 15%  | 0.09%                    | 5.54%   | 0.20%               | 12.11%  | 0.16%                 | 9.83%   | 0.10%             | 8.72%   |  |
| 20%  | 0.16%                    | 9.39%   | 0.31%               | 19.22%  | 0.32%                 | 19.47%  | 0.20%             | 17.65%  |  |
| Beyond 20%                                     | 1.30%                    | 78.56%  | 0.91%               | 56.25%  | 1.03%                 | 62.61%  | 0.71%             | 63.93%  |  |

- Upto 5% band, only 53% to 72% of time blocks are in this range, however with the increase in band to 8%, 75% to 85% of the time blocks at aggregated at the park level falls in this range. Hence, we request to increase the band to 8% from the proposed 5%.
- Although the percentage of time blocks beyond 20% band are in the range of 2.65% to 3.85%, however the DSM charges revenue accounted at the park level for the time blocks is in the range of 56% to 78%, therefore we request to provide 30% of the contract rate on the either side.
- c) Comparison of DSM charges accountable at park level across the regions under different regimes are shown below for FY24:

| DSM Charges (% of revenue) accountable under different regimes |             |                  |                                     |                         |                       |                     |  |  |  |
|--|-------------|------------------|-------------------------------------|-------------------------|-----------------------|---------------------|--|--|--|
| Region   | Project     | Capacity<br>(MW) | Prior to<br>Existing<br>Regulations | Existing<br>Regulations | Proposed<br>Amendment | As per<br>Suggested |  |  |  |
| SR   | Anantpuramu | 1400             | 0.14%                               | 0.71%                   | 1.66%                 | 0.78%               |  |  |  |
| SR   | Pavagada    | 2050             | 0.13%                               | 0.69%                   | 1.61%                 | 0.76%               |  |  |  |
| WR   | Raghanesda  | 600              | 0.16%                               | 0.94%                   | 1.65%                 | 0.82%               |  |  |  |
| NR   | Bhadla      | 3130             | 0.11%                               | 0.49%                   | 1.11%                 | 0.56%               |  |  |  |

- From above analysis, the net contribute on account of DSM is approx 0.6 to 0.8% of the generated revenue as per the suggested mechanism.
- Hence, the proposed middle band of 10% to 20% for 50% penalty is large and high, therefore, we request to kindly break this band into 2 as 8% to 15% and 15% to 20% with the penal charges of 10% and 40%.
